

It's Here!

The new .wav file recording utility that so many have been asking for.

Record35 & Record33

Record35 (and Record33) allows you to use the Ivie jacket microphone or line input, low noise preamplifier and 24 bit A/D converter to record a .wav file directly into your Axim or iPAQ memory.

The Record software is available as a stand-alone application with a user-friendly interface. While intended primarily for instrumentation recording (for later analysis or source preservation), the Record software can be used in conjunction with the IE-35 or IE-33 for virtually any recording purpose.

- Use the your Ivie hand held analyzer to record .wav files
- New feature in IE-33 and IE-35 software allows you to select a specific .wav file as the input source
- Record room impulses for later RT-60 analysis
- Record noise for later analysis
- Adjustable input gain
- Record initial .wav files and have the ability to append additional material to the end of the file at any time!
- Full .wav file naming and file management system
- .wav files are transportable to your PC for playback, editing or analysis by other software
- Store .wav files in Main Memory, or on an SD card
- File size is only limited by memory size
- Records in mono through jacket microphone input, sample rate 44.1 kHz, 16 bits
- Records in stereo when dual line inputs are selected, sample rate 44.1 kHz, 16 bits

Separate versions are available for the IE-33 using Windows Mobile 2003 and the IE-35 using Windows Mobile 2005.
